Report text:

Messages of globalization often read like a novel. Global competition and electronic commerce are transforming business practices. For financial professionals, the story hangs on the need to transform themselves from "bean counters" and tax accountants into the next generation of business heroes - savvy chain managers. They are the professionals who assume key roles in operations by integrating suppliers and customers throughout planning and operations. Supply chain management has emerged as the total flow vehicle on the key to success in the global economy, regardless of industry or company size. Its premise is simple: Operational strategies should be designed and developed around customer needs. As a company adapts to a customer-driven supply chain, it is critical to develop appropriate performance measures. As the organization becomes more portable, measurements must incorporate both members - supplier and customer - outside the traditional organization.

Foreign investments are increasingly an important area for international trade in general and for trade of cultural goods and services in particular. By the end of 1996, the total stock of foreign direct investment owned by companies outside their home countries was near \$1 trillion and OECD members were the source of 85% of all foreign direct investment. During the Uruguay Round there was a strong informal understanding new negotiations of a free-standing, enforceable multilateral investment agreement, but countries' positions on the issue were very different.

Can you measure how your company's people investments contribute to the bottom line? Do you have data from specific personnel initiatives to increased corporate performance? How can you have numbers showing the return on IT investment?

You probably have a strong conviction decision that supports your change programs, but do you have proof that they work? Well, just about, neither do most firms. But an labor-related cost consumes larger portions of firms' total corporate expenditures over, companies are increasingly motivated to find ways to demonstrate the ROI of their human capital. And some are beginning to do just that.

Globalization is a new phenomenon that is sweeping the globe. As globalization continues to spread globally, more and more countries will find way to its sweeping force.
