In the Fall of 2005 and Fall 2009, we administered a Student Satisfaction Survey to approximately 895 and 1360 students, respectively. Students were asked to report on the number of hours per week they spend on various types of activities such as studying, watching TV, Working and Socializing. As shown in the chart below, from 2005 to 2009 there are no large shifts in how students spend their time but this is one notable difference: in 2009, a greater percentage of students spend no time working and a smaller percentage work 20 or more hours.

*Not asked in 2005*
